

Subl
C3
and

16000 decitex•end or pick, respectively /2.54 cm, the fabric having the load at 15% tensile elongation in the range of 3 to 35 N•%/2.54 cm, and the tensile work at break in the range of 7000 to 30000 N•%/2.54 cm.--

Subl
C3
and

--10 (New) An air bag formed of a woven fabric composed of polyamide fiber yarns containing a copper compound having a copper concentration in the range of 30 to 200 ppm, and the polyamide fiber yarns containing a plurality of single filaments each filament having a fineness in the range of 1 to 3.3 decitex, wherein the product of fineness of the warp or weft of the fabric multiplied by the weave density of the fabric being less than 16000 decitex•end or pick, respectively /2.54 cm, the fabric having the load at 15% elongation in the range of 3 to 35 N•%/2.54 cm and the tensile work at break in the range of 7000 to 30000 N•%/2.54 cm, the fabric being sewn or bonded to have a three dimensional contour.--

Subl
C3
and

--11. (New) An air bag as defined by claim 9 or 10, wherein the product of the fineness of weft multiplied by the weave density of weft is larger than the product of the fineness of warp multiplied by the weave density of warp.--

--12 (New) An air bag as defined by claim 9 or 10, wherein the weft and warp forming the woven fabric each have a birefringence and the birefringence of the weft is larger than that of the warp.--

--13 (New) An air bag as defined by claim 9 or 10, wherein the weave is selected from a plain weave, a rip-stop weave and a mat weave.--

--14. (New) An air bag as defined by claim 9, wherein the bag-shaped air bag is of a circular shape as seen in plan view.--
